

## lista 03 (Distribuição Amostral da Média, Proporção e Aplicações)

Pedro Manoel Herminio Alves - 119210706

25/10/2022

### Questão 01

a)

$$\begin{aligned} P(90 < X < 110) &= P\left(\frac{90-100}{10} < Z < \frac{110-100}{10}\right) = P(-1 < Z < 1) \\ &= 2 \cdot P(0 \leq Z \leq 1) = 2 \cdot 0,2420 = \underline{\underline{0,4840}} \end{aligned}$$

b)

$$\begin{aligned} P(90 < \bar{X} < 110) &= P\left(\frac{90-100}{\sqrt{\frac{100}{36}}} < Z < \frac{110-100}{\sqrt{\frac{100}{36}}}\right) = P(-4 < Z < 4) \\ &= 2 \cdot P(0 \leq Z \leq 4) = 2 \cdot 0,5 = \underline{\underline{1}} \end{aligned}$$

c)

```
mean = 100
sdX = 10
sd_X = 100/sqrt(16)

curve(dnorm(x, mean, sdX), ylab = "dnorm(x)", from=60, to=140, col="blue")
curve(dnorm(x, mean, sd_X), from=60, to=140, add=TRUE, col="red")
```

d)

$$P(90 < \bar{X} < 110) = 0,95$$

$$\hookrightarrow P\left(\frac{90-100}{\sqrt{\frac{100}{n}}} < Z < \frac{110-100}{\sqrt{\frac{100}{n}}}\right) = P(-\sqrt{n} < Z < \sqrt{n})$$

$$= 2 \cdot P(0 \leq Z \leq \sqrt{n}) = 0,95 = P(0 \leq Z \leq \sqrt{n}) = 0,475$$

$$= \sqrt{n} = 1,96$$

$$n = 1,96^2$$

$$n = 3,84 \approx \underline{\underline{4}}$$

## Questão 02

a)

$$P(X < 500) = 0,10$$

$$\hookrightarrow P\left(Z < \frac{500 - \mu}{\frac{\sigma}{\sqrt{n}}}\right) = P(Z < a) = 0,10$$

$$\begin{array}{l} * P(0 \leq Z \leq a) = 0,5 - 0,10 = 0,40 \\ \quad - a = 1,28 \\ \quad a = 1,28 \end{array} \quad \left| \begin{array}{l} * \frac{500 - \mu}{\frac{\sigma}{\sqrt{n}}} = -1,28 \\ 500 - \mu = -32,8 \\ -\mu = -532,8 \\ \mu = \underline{\underline{532,8}} \end{array} \right.$$

b)

$$X_1 + X_2 + X_3 + X_4 < 2000 \Leftrightarrow \bar{X} < 500$$

$$P(\bar{X} < 500) = P\left(Z < \frac{500 - 532,8}{\sqrt{\frac{10}{4}}}\right) = P(Z < -2,56) = P(Z > 2,56)$$

$$= 0,5 - P(0 \leq Z \leq 2,56) = 0,5 - 0,4948$$

$$= \underline{\underline{0,0052}}$$

### Questão 03

a)

$$P(\bar{X} < 495) + P(\bar{X} > 520) = P\left(Z < \frac{495 - 532,8}{\sqrt{25}}\right) + P\left(Z > \frac{520 - 532,8}{\sqrt{25}}\right)$$

$$= P(Z < -3,56) + P(Z > 2,56) = P(Z > 3,56) + P(Z > 2,56)$$

$$= [0,5 - P(0 \leq Z \leq 3,56)] + [0,5 - P(0 \leq Z \leq 2,56)]$$

$$= [0,5 - 0,9998] + [0,5 - 0,4253]$$

$$= 0,0002 + 0,0747$$

$$= \underline{\underline{0,0749}}$$

b)

$$\begin{aligned}P(495 \leq \bar{x} \leq 520) &= P\left(\frac{495-500}{\sqrt{25}} \leq Z \leq \frac{520-500}{\sqrt{25}}\right) = P(-1 \leq Z \leq 4) \\&= P(0 \leq Z \leq 1) + P(0 \leq Z \leq 4) \\&= 0,3745 + 0,5 \\&= \underline{\underline{0,8745}}\end{aligned}$$

#### Questão 04

$$\begin{aligned}p &= 0,10 & \bar{p} &\sim N(0,10; 0,0045) \\n &= 20 & \hookrightarrow & \frac{0,10 - 0,90}{20}\end{aligned}$$

$$\begin{aligned}P(\bar{p} > 0,15) &= P\left(Z > \frac{0,15 - 0,10}{\sqrt{0,0045}}\right) = P(Z > 0,14) = 0,5 - P(0 \leq Z \leq 0,14) \\&= 0,5 - 0,2134 \\&= \underline{\underline{0,2866}}\end{aligned}$$

### Questão 05

a)

$$\bar{P} \sim N\left(0,1; \frac{0,1 \cdot 0,9}{100}\right)$$

$\hookrightarrow 0,0009$

$$P(\bar{P} > 0,1) = P\left(Z > \frac{0,1 - 0,1}{\sqrt{0,0009}}\right) = P(Z > 0) = \underline{\underline{0,5}}$$

b)

$$P(X=K) = \binom{100}{K} \cdot 0,1^K \cdot 0,9^{100-K}$$

$$\begin{aligned} P(X=0) &= \binom{100}{0} \cdot 0,1^0 \cdot 0,9^{100} \\ &= 1 \cdot 1 \cdot 0,00002 \\ &= \underline{\underline{0,00002}} \end{aligned}$$

### Questão 06

$$\mu = 120 \quad * \frac{3500}{30} = 116,67 \quad \bar{X} \sim N(120, 83,3)$$

$$\sigma = 50$$

$$\sigma^2 = 2500$$

$$n = 30$$

$$* \frac{2500}{30} = 83,3$$

$$P(\bar{X} \geq 116,67) = P\left(Z \geq \frac{116,67 - 120}{\sqrt{83,3}}\right) = P(Z \geq -0,365)$$

$$= 0,5 + P(0 \leq Z \leq 0,365)$$

$$= 0,5 + 0,1473$$

$$= \underline{\underline{0,6473}}$$
